Multiple Body and Lipo Technologies

Clinically proven results

Very different from cellulite and body treatments currently used, this multifunctional high-tech platform (radiofrequency + acoustic waves + rhythmic vacuum massage + fat freezing) surprisingly increases the quality of the aesthetic results for the following applications:

- Excess fat
- Cellulite
- Pre- and post-liposuction
- Body smoothing
- Skin firming

How does Fusiomed for the body work?

Fusiomed combines multiple treatment effects:

1. TRIPOLAR AND RF SHAPE – superficial and deep uniform heating is delivered to the surface and the fatty layers below the skin, the effects of tissue tightening and increased blood circulation cause the fatty deposits to be drained through the lymphatic system, reducing the appearance of cellulite and tightening the skin.

2. DUOSHAPE - Radiofrequency + Low Frequency Ultrasound (cavitation) - mechanical vibration and disruption of fibrosis and fat cells; waste fat is expelled from the cells and then eliminated through the metabolism, thanks to the reactivated blood microcirculation.

3. CRYOLIPOSCULPT - Fat Freezing - Reduction of fat deposit thanks to the sequential process of intense heat (60°) and intense cold (-10°) that is able to target only the fat cells in that area. Since fat cells is more sensitive to cold temperatures than other skin cells, it freezes the lipids in the cells which then slowly dissolve without causing trauma or injury to the surrounding tissues.

4. LIPOMASSAGE - Specially designed suction cups increase the metabolism of stored energy and promote lymphatic drainage.

Are the results permanent?

Results achieved with Fusiomed are permanent. Nevertheless, the beneficial effects given by the treatment will be influenced by your life style. Remember: smoke, alcohol, stress and poor eating habits all interfere with the way your body looks.

How many treatments?

Results are visible even after the first session. Fusiomed combines multiple technologies in the same procedure capable of producing evident changes on skin elasticity, cellulite and inches loss. Depending from the procedure performed, Fusiomed guarantees stable results in only an average of 6-10 sessions.

Is it safe? And how long will it take to recover from the treatment?

Fusiomed is a generally safe, non-surgical, non-invasive procedure that does not require anesthesia. Some people experience mild redness immediately following the procedure, but this usually disappears quickly. Most people find that they can return to work and normal activities immediately after treatment. You may be advised to use soothing skin formulations to apply to the treatment area to minimize any discomfort caused by the procedure.

Who is the best candidate for Fusiomed procedure?

Adults in good shape with areas of unwanted fat that do not want to undergo surgery are ideal candidates for Fusiomed. Good candidates are already physically active and adhere to a healthy diet.

Why choose Fusiomed over other procedures?

Clinical trials have shown that the results obtained with Fusiomed are extremely satisfactory and proof the procedure to be effective, safe and without doubt a revolutionary approach in the treatment of cellulite, excess fat and poor circulation.
